- **Abstract:** The research looked into designing and implementing a Supply Office Inventory System to replace the manual procedure in the NMSCST supply office with a computerized inventory system. The total number of respondents was ten, and the method employed was full enumeration. The study's methodologies were based on a conceptual paradigm that was created to guide and assure the project's accuracy. The study was conducted using both descriptive and developmental methodologies and approaches. The NMSCST Supply Office Inventory System was successfully conceived and built based on the findings. Furthermore, it is suggested that the system be examined and, if necessary, changed on a regular basis and to meet the demands of the present time.
