- **Abstract:** The US-China dispute in the South China Sea (SCS) appears to be showing no signs of resolution, prompting several countries around China, including Taiwan, India, and Japan, to strengthen strategic ties with the US. Meanwhile, Indonesia maintains a neutral stance, refusing to take a side with either of them. This principle is still followed in accordance with the preamble to the 1945 Constitution, which calls for the establishment of a world order founded on liberty, eternal peace, and social justice. This study employs a qualitative method in conjunction with an estimation methodology to analyze strategic changes through the lens of geopolitics, foreign diplomacy, and defense diplomacy.
- **Keywords:** Diplomacy, Geopolitics, Strategic Environment, SCS and Defense
