- **Abstract:** In the article, education as a whole is considered as a pedagogical system that solves the tasks of purposeful, versatile personality development. Physical education as an integral part in this sense is no exception. The article discusses the features of teaching human anatomy and physiology to students studying in the direction of "physical culture". Teaching human anatomy and physiology for future specialists in physical culture and sports has its characteristics, in comparison with that for students of medical universities and biological faculties of universities. Traditional and innovative teaching methods within the disciplines of human anatomy and physiology are considered.
