

The Influence of Scientific Attitude and Emotional Intelligence on Learning Outcomes of Research Methodology for FKIP Unpatti Ambonese Students.

Emma Rumahlewang, Idris. Moh. Latar, Jhoni Lagun Siang

Abstract

This study aims to analyze "The Effect of Scientific Attitude and Emotional Intelligence on Learning Outcomes of Research Methodology. The method used in this research is a survey method with correlational techniques. This method provides an overview of the research variables as well as investigates the influence between variables, therefore this method reveals factual data based on the information found. The results showed that: 1) The scientific attitude has a positive effect on learning outcomes of research methodology significantly at the significance level $\alpha = 0.05$ with a value of $F = 297.624$, 2) Emotional intelligence has a positive effect on learning outcomes of research methodology significantly at the significance level $\alpha = 0.05$ with a value of $F = 28.165$, 3) The scientific attitude and emotional intelligence together or simultaneously have a positive effect on learning outcomes of research methodology significantly at the significance level of $\alpha = 0.05$ with a value of $F = 956.777$.

Keywords: Effect of Scientific Attitude and Emotional Intelligence, Research Methodology, correlational technique
